Waste

Week

2024

What happens when you Waste?

What happens is when you waste things such as plastic or old toys, they end up in a landfill.

All together, unsustainable waste has negatively impacted the environment through people wasting things that could be recycled and causes climate crisis, wildlife population, and our very own public health.

A landfill is where all waste is put in the earth, so it decomposes (which is bad)

Compost

Recycled food is recycled into soil conditioner and fertilisers.

Wasted food has a big impact on the earth. If it ends up in a landfill site it will rot. The best thing we can do with our food is enjoy it.

Some compost foods are:

- eggs shells
- banana peels
- apple cores
- tea bag
- old meat
- old bread

and more!

Compost bins

We waste things that can turn in to compost! Things that can be composted are on the left side. Each class has a compost bin which looks like this

Things that we waste that are.
reusable.

These are toys that get wasted after
use.

These toys can be donated or passed
on.

Things you can do to not waste
your toys:

Donate it to charity.

Give it to someone.

But whatever you do don't
WASTE it
