

# Y 1 COMPUTING: PROGRAMMING- Introduction to Animation Knowledge Organiser

## Overview

### Animations in Scratch Jr.

- **Programming** is when we make a set of instructions for computers to follow.
- **Scratch Jr.** is a program that we can use in order to code our own stories and animations. It involves sprites (characters on the screen).
- We use **algorithms** (a set of instructions to perform a task) to program the sprite to do different things.

## The Basics of Scratch Jr.

- **What is Scratch Jr?** Scratch is a website/ app that lets us code our own stories, games and animations.

- **Sprites:** Scratch Jr. uses characters called sprites. The main sprite is a cat called Scratch.

- **Home:** Clicking on the house takes you 'home' to your project screen.

### Getting Started

- The + starts a new project.

- These are programming blocks. We drag them into the programming area (right). Clicking the block in the area makes the sprite perform on the stage.

- **Moving Blocks:** These make the Sprite move in different ways.

- **Background:** Backgrounds are added by clicking this icon (right).

- **Start Blocks:** Start blocks are yellow. These are used to start/ run programs.

- **End Blocks:** End blocks are red. These show what happens at the end of your program.

## Sequencing

- **Sequences:** -A sequence is a pattern or process in which one thing follows another. In Scratch Jr. we can stack blocks together side by side in order to create programs made up of sequences.

- **Deleting Blocks:** Blocks can be removed from programs by dragging them from the programming area back into the blocks palette.

- **Repeating Blocks:** For something to happen more than once, we can change the number underneath the block.

- **Running the Code:** Run your animation by tapping the full

## Algorithms and Programming

- An **algorithm** is a set of instructions for performing a task. Designing an algorithm can help us to make the sprite do the things that we want it to do.

- **Programming** is when we move the blocks into the position (based on our algorithm design). Our programming codes the sprite to perform the actions.

## Debugging

- Sometimes, things don't work exactly how we want them to the first time. This may be a problem with our algorithm, or we could have made a mistake in our programming.

- If the animation does not work correctly the first time, remember to **debug** it. This means finding and fixing the problems.

## Important Vocabulary

Command   Sprite   Compare   Programming area   Block   Joining   Start block   Run   Background   Delete   Reset   Predict   Effect   Change   Value   Instructions   Design
